CSPanorama Html5 Viewer

CSPanorama is the latest web based document viewer solution released by CSoft. With CSPanorama you can view, manage and share your images, scanned documents, pdf and CAD files over your network. CSPanorama is powered by our very own HTML5 viewer which supports various file formats. The application is available on any handheld device connected to the internet. This intelligent web application runs on your network and offers access to files for your users according to their authorization level. You can store documents in your server or in a certain cloud drives with the same security and control. You can create new users, and set their custom access levels in the application. Users can view, upload and download available files from your storage or from scanned images, create annotations and print files from the local browser. Users can also share one or any files on the network. Shared files are accessible via a public link. The shared link has limited functionality where only that file will be visible to users accessing that specific link.

CSoft
